

# Scleral Contact Lens Designed for Healthy Eyes

## Crisp Vision

Soft lens patients no longer have to struggle with variable, unstable vision. EasyFit contacts are designed to vault the cornea and land softly on the sclera. Your patients will have exceptionally sharp, stable vision all day.

## Extraordinary Comfort

EasyFit lenses create a tear reservoir over the sensitive area of the eye hydrating and bathing the eye throughout the day. Finally, your patients can experience all day comfort.

## Longer Wearing with Hydra-PEG™

Tangible Hydra-PEG is an advanced coating applied to all EasyFit lenses. It dramatically increases wearing time by improving lens wettability and lubricity, as well as reducing friction and prolonging tear break-up time.

## Ideal for Many Patients

- “With the rule” astigmatics
- Dry eye patients
- Sports and active lifestyles
- New contact lens patients
- Dissatisfied soft lens wearers
- Intolerant GP users

*“With the new Hydro-PEG coating I have found my vision to be much crisper and clearer. I can wear my contacts 18 hours a day without a problem. They are comfortable and the lenses have changed my life and how I work every day.”*  
 - Maureen, Acculens scleral lens wearer

*“EasyFit is my lens of choice in lieu of corneal gas permeable lenses and many soft toric lenses. They are easy to fit and are exceptionally comfortable for the patient.”*  
 - Larry Forrest, OD
